

FaunOS shadow-0.5.4-stable Released

14 March 2008

We are pleased to announce the availability of FaunOS-shadow-0.5.4-stable. FaunOS is a fully integrated Linux distribution with 637 packages installed and configured for use. Based on Arch Linux, FaunOS is optimized for the i686 architecture, and specifically designed to run from a 1GB or larger portable USB flash drive. A live DVD version is also available. The USB version allows saving changes back to the USB flash drive. FaunOS includes PacTrac which allows easy installation and upgrade of over 4200 binary packages from the combined FaunOS and Arch Linux software repositories. FaunOS can also be permanently installed to a hard drive.

For a list of features and changes, see the [release notes](#).

You can get the latest version [here](#).

[Click here for download and installation instructions.](#)

Browse our [wiki](#) for additional info. Thanks to all who have contributed their knowledge!

Our support and discussion forums can be found at <http://forum.faunos.com>.

As always, FaunOS does not change or install anything on your hard drive (unless, of course, you tell it to).

Enjoy!

The FaunOS Team
