

# FaunOS: Known Mirrors

*A compilation of known mirrors for FaunOS binary releases.*

## Table of contents

1 How to download.....	2
2 Mirrors.....	2
3 Verify your downloads.....	2
3.1 PGP Signature.....	2
3.2 MD5 Checksum.....	3

## 1. How to download

Use the links below to download a FaunOS binary distribution from a participating mirror. It is good practice to [verify the integrity](#) of the files once you've completed the download.

### Thanks!

Thanks for everyone's help! We can always use more mirrors. If you'd like to add yours to this list, please let us know ([mirrors@faunos.com](mailto:mirrors@faunos.com)). Also, if you find a link that is down, do let us know.

If you're not sure which files you need, read the [installation and download instructions](#) before using the mirrors on this page.

## 2. Mirrors

Location	URL
USA	<a href="http://www.coderseffigy.com/mirrors/FaunOS/FaunOS-shadow-0.5.4-stable-usb.img">http://www.coderseffigy.com/mirrors/FaunOS/FaunOS-shadow-0.5.4-stable-usb.img</a>
USA	<a href="http://www.madeforus.com/mirrors/FaunOS/FaunOS-shadow-0.5.4-stable-usb.img">http://www.madeforus.com/mirrors/FaunOS/FaunOS-shadow-0.5.4-stable-usb.img</a>

## 3. Verify your downloads

It is always a good idea that you verify the integrity of the downloaded files using the MD5 and PGP signatures. PGP verification provides stronger protection than MD5 against accidental corruption or tampering; it also verifies that the file came from a certain person (in this case FaunOS).

### 3.1. PGP Signature

The PGP signatures can be verified using PGP or GPG. First download the FaunOS [FaunOS-pubkey.asc](#) as well as the \*.asc signature files for the distribution. It is important that you get these files from the ultimate trusted source - the FaunOS site, rather than from a mirror. Then verify the signatures using, for example

```
% pgpk -a FaunOS-pubkey.asc
% pgpv faunos-shadow-0.5.4-stable-usb.img.asc
```

*or*

```
% gpg -ka FaunOS-pubkey.asc  
% gpg faunos-shadow-0.5.4-stable-usb.img.asc
```

*or*

```
% gpg --import FaunOS-pubkey.asc  
% gpg --verify faunos-shadow-0.5.4-stable-usb.img.asc
```

The faunos-shadow-\* files are signed by Raymano Garibaldi A1BCD64B

### 3.2. MD5 Checksum

To verify the MD5 checksum on the files, you need to use a program called md5 or md5sum, which is included in many \*nix distributions. For example,

```
% md5sum faunos-shadow-0.5.4-stable-usb.img  
... output should match the relevant string in  
faunos-shadow-0.5.4-stable-md5sums.txt
```
